PoE Control Option for Ducommun Multi-Throw Coaxial Switches

Ducommun offers a general purpose Ethernet controlled option via RJ45 interface control. Our standardized switches support this Power over Ethernet (PoE) option and can operated remotely using supplied GUI program, Web UI or programmed by the user.

This new control option is now available for all of our standard catalog multi-throw coaxial switches. The control option is available with failsafe and normally opens functions.

Features

- Multiple output RF transmission lines
- Powered by PoE
- Remotely control via Ethernet
- Easy installation and operation with unique configurable IP address
- Compatible with 32/64-bit windows, Android, and IOS

Specifications

Frequency:	DC to 26.5 GHz
Available for:	Standardized products SP3T to S10T

Applications

- LAB
- Test equipment
- Control systems
